

The MagnaCharger: Pulsed Magnetic Cellular Exercise

The MagnaCharger is the most advanced injury repair and pain elimination technology in the world today. Here's how it works and why we believe it will change the future of natural medicine, as we know it...

Pulsed Magnetic Cellular Exercise increases your cells ability to produce energy. Every cell in your body is a small electrical battery, and the ability of the body to recharge these little batteries determines how much work it can accomplish.

There are many natural healing modalities available to us today: nutrition, healing diets, chiropractic, cold laser therapy, acupuncture etc... but despite their best efforts many doctors still find that many patients hit a "healing limit" where all healing progress stops. Current research now points to the fact that the patient's cellular energy level is the deciding factor in whether they can heal or not.

The trillions of tiny cells in our body need two things to ensure an endless supply of life sustaining energy: 1) nutrition and, 2) magnetic energy.

Many people have to stop and think about the second one, "where and how" do we receive this energy? The earth is a giant magnet, and we are constantly surrounded by the earth's magnetic field. Unfortunately, more and more modern creations are dulling the earth's magnetic effect on our bodies. Living in modern homes and surrounding ourselves by electrical alternating currents (homes, offices, computers and appliances) has decreased the magnetic energy that we receive on a daily basis. We all know there are daily amounts of vitamins and nutrients that we need to consume to maintain our health, but science has yet to set our daily magnetic energy needs. The truth is it varies greatly depending on our lifestyle, where we live, and how healthy we are.

The following analogy will help to explain the importance of this magnetic energy.

Let's visualize a construction crew building a new home. The workers need two things in the right quantity to finish the job: 1) building supplies, and 2) tools.

The building supplies represent the nutrients that our cells use to build and repair our body. The cordless power tools the workers use to build the house represent the energy charge that is necessary to finish the work. If all the tools run out of power will bringing the workers more lumber, nails and bricks fix the issues? Of course not, but this is exactly what people are doing with nutrition. Most people are aware that nutrition is important to health and that is a great thing, however, if you have added more nutrients to the body but have not noticed an improvement the next question is; have you recharged your workers lately?

This analogy also perfectly answers the question: “How many pulsed magnetic therapies will I need?” The answer, as with most natural therapies, is different for each person. The ability of your system to hold a charge is dependent on many factors. But when it comes down to it the answer is simple, you need to keep recharging until your body is finished with its work.

Your ‘batteries’ may need a charge once per week or three times per week depending on your goals. The length of therapy depends on the amount of work that needs to be done. Are you building a new deck or a whole new house?

Pulsed magnetic cellular exercise is here to stay. On a recent episode of Dr. Oz, he proclaimed that pulsed magnetics was the future of healing medicine. That is powerful statement from someone who has seen it all.

Share this information with anyone and everyone whom you know that has a new injury, chronic injury or pain that they have not been able to resolve. Pulsed Magnetic Therapy also holds great promise for those with fatigue, sleep disturbance, anxiety and a myriad of other chronic conditions.
